2023
Annual Report

GAfPA
Global Alliance for Patient Access
Throughout 2023, the Global Alliance for Patient Access advanced patient-centered care by raising awareness and advocating for policies that ensure patient access.

GAfPA convened and facilitated discussions among health care stakeholders across a variety of conditions, including:

- Cardiovascular disease
- Chronic kidney disease
- Respiratory disease
- Rheumatic disease

Across the globe, GAfPA translated discussion into action.

**Raising Awareness**
In Australia, China, Canada and Europe, GAfPA led conversations on the importance of cholesterol screening and management, and the need for policies to promote access to novel immunizations for respiratory conditions.

**Building Alliances**
GAfPA spearheaded the creation of the Global Patient Alliance for Kidney Health, a group of more than 20 allied patient advocacy organizations from around the world, to advocate for greater access to screening and early treatment for chronic kidney disease.

**Promoting Policy Advocacy**
GAfPA developed and distributed multi-media advocacy resources to support patients and health care providers in their efforts to promote patient-centered care.
Throughout the year, GAfPA spotlighted the benefits of patient-centered care. Metrics from 2023 reflect the commitment of advocates to raising awareness, improving policy and empowering patients to meet today’s health care challenges.
The leading cause of death globally, cardiovascular disease remained a focus of GAfPA’s education and advocacy efforts in 2023.

**High Cholesterol**

In 2023, GAfPA launched an awareness campaign in Australia, *Know Your Numbers, Treat Your Risk*, to highlight the link between high LDL cholesterol and cardiovascular disease.

In China, GAfPA partnered with stakeholders to develop a campaign focused on the benefits of cholesterol management. And at the annual congress of the European Society of Cardiology, GAfPA convened patient advocates to assess how greater awareness might address unmet needs in managing atherosclerosis.

GAfPA also convened Canadian stakeholders to identify how to make LDL management a health priority in Canada.

These efforts build upon GAfPA’s years of collaborating with stakeholders to identify country-specific unmet needs for patients living with high LDL cholesterol and the health care providers who diagnose and treat them.

**Hypertension**

Updates to treatment guidelines for hypertension in Europe spurred the European Alliance for Patient Access to undertake an education campaign about new treatment options and the need for awareness and access.
Chronic kidney disease is a burdensome, prevalent condition that exacts a growing toll on patients, health care systems, the environment and governments worldwide.

GAfPA featured chronic kidney disease prominently in its advocacy efforts in 2023.

In March, GAfPA convened leading patient advocacy organizations from around the world to consider disease burden, the value of early screening and treatment, and how to improve access globally. The discussion ultimately led to the formation of the Global Patient Alliance for Kidney Health.

Composed of more than 20 patient advocacy organizations from four continents, the Global Patient Alliance for Kidney Health aims to enhance access to screening and early treatment of chronic kidney disease. The kidney health alliance launched on September 19, 2023, at Devex’s “How Improving Kidney Health Can Transform Health Systems for All” event, which took place in New York City alongside the United Nations General Assembly meeting.

Clinical trials can pave the way for patients to access innovative treatments, both now and in the future. But policies must encourage innovation so that clinical trials can open new doors and help patients achieve optimal health outcomes.

Promoting Innovation

Throughout 2023, GAfPA spotlighted global policies impacting innovation and their effect on clinical trials and patient access.

Efforts included:

- Creating advocacy resources to highlight the impact of policies on innovation and access to clinical trials
- Meeting with local stakeholders to identify local clinical trial needs and identify opportunities for education and advocacy
- Hosting a webinar on recent EU legislation that will impact clinical trials and innovation
- Crafting a bimonthly newsletter to highlight current trends in clinical trials policy

Respiratory syncytial virus, or RSV, places a heavy burden on babies and their families. Innovation has led to new immunizations that can protect many infants from the harm of this disease. But policies must ensure that all infants can access these treatments to receive the health benefits and to reduce the financial, social and emotional burdens experienced by families.

Understanding & Overcoming the Burden of RSV

In 2023, the Global Alliance for Patient Access worked with patient advocates and health care providers to better understand the barriers that RSV patients and their families face across the globe.

Efforts included:

- Convening stakeholders in China, Europe and Latin America to identify barriers to RSV immunizations that might be addressed through greater awareness and policy advocacy
- Highlighting the burden of RSV throughout China, Europe and Latin America
- Developing advocacy resources to raise awareness of RSV and advocate for policies to overcome barriers to care

In 2023, GAfPA continued advocacy efforts related to rheumatic diseases - painful, sometimes debilitating conditions that impact millions globally.

Raising Awareness

With gout’s global burden continuing to grow, GAfPA undertook an awareness awareness campaign that culminated in the first ever Global Gout Awareness Day on May 22, 2023. The initiative brought together patients and other stakeholders to address stigma and lack of disease awareness - which have led to underdiagnosis and difficulties for patients managing their condition.

The campaign was accompanied by a suite of advocacy resources for various geographies, namely Australia, Europe and South Africa.

Convening Global Stakeholders

In December, GAfPA convened global stakeholders in rheumatic disease in Brussels for a meeting focused on the value of remission. The health care providers and patient advocates identified the benefits of remission and barriers to optimal care. Informed by these stakeholder perspectives, GAfPA will release a report in 2024 that summarizes their perspectives and sets forth an agenda of solutions to overcome the barriers to remission.

In 2024, GAfPA will continue its advocacy and education on issues related to clinical trials, chronic kidney disease, cardiovascular health, rheumatic and respiratory diseases, and more.

GAfPA will also build upon its robust work related to chronic kidney disease to advance education, raise awareness and drive policy conversation to improve patient access to early screening and treatment.

This year offered advocates unique opportunities to engage patients and policymakers across the globe. GAfPA looks toward 2024 as a chance to strengthen partnerships, increase education and further the vision of patient-centered care for all people.
About the Global Alliance for Patient Access

The Global Alliance for Patient Access is an international platform for health care providers and patient advocates to inform policy dialogue about patient-centered care.
